Simply secure

A custom security solution for your building
The Vitess intelligent locking system is precisely tailored to meet your individual needs. ABUS offers you a complete, well-designed modular system instead of an off-the-peg solution. You can put together a custom security solution for your building by choosing the type of cylinder and finishes as well as special features.

Quality "Made in Germany"
Excellent raw materials, high-precision manufacturing and ABUS's experience in cylinders give you a good feeling of security. Our locking cylinders are developed and manufactured in Germany to guarantee the highest product quality and a long life cycle for our security solutions.

Individual planning and advice
Vitess can be used in single-differ locks as well as compact to complex master key systems. Your ABUS partner can advise you on all aspects of your building's security, from planning the locking system through to installation.

One key for everything
Opening the main entrance door, your front door, letter box and cellar with just one key – ABUS makes it possible. Each person who uses the master key system can be assigned individual locking permissions.

High security on excellent terms
The Intop system and the special profile design give you reliable protection against illegal key copies and unauthorised entry. Vitess offers you an unbeatable cost/performance ratio.

Future-proof investment
The Vitess system can be expanded at any time, providing you with maximum flexibility to develop and change your system. We can deliver expansion products for your locking system for many years after installation.

Mechanical and electronic systems intelligently connected

An ABUS master key system provides the flexibility to combine mechanical and electronic locking cylinders at any time – either factory-fitted or later as a retrofit.

This potential for expansion gives you maximum flexibility and future-proofing when planning your building security. Combined keys allow you to lock mechanical and electronic cylinders with just one key. Alarm systems and external systems can be integrated in the master key system at any time.
